Infection Control Contributes to Healthy Experience at Fitness Club

Summary

In an effort to provide members with a personalized, healthy and differentiated health club experience, FitMe Wellness added Sanosil's Halo Disinfection System to their routine cleaning program. The protocol was implemented during cold and flu season to minimize the spread of MRSA, influenza and other harmful pathogens.

Results

One day per week, Sanosil disinfectant is fogged in workout and storage spaces that contain sophisticated and expensive equipment such as elliptical machines as well as exercise mats, balls, free weights and weight machines. The Halo Fogger is set up at the end of the day, to treat the facility overnight when the health club is unoccupied. The fogger is unplugged and stored by the first employee entering the gym the next morning.

The hydrogen peroxide-based Sanosil disinfectant is environmentally preferable to FitMe Wellness clients who expect the best from the facility. The odor-free formulation does not produce harmful fumes, toxic by-products, metal corrosion or residue. The no rinse or wipe product minimizes the amount of labor needed for disinfection.

Due to the effectiveness of Sanosil in preventing the spread of illness, FitMe Wellness has continued to fog year round, displaying the SanoSealed mark so that members understand the ongoing commitment of the owners to their overall wellness.
