

easily
If you could lower your
infection rates by 66%,
why wouldn't you?

By using the Halo Disinfection System, the first whole room fogging system approved by the EPA, a large urban teaching hospital reduced their *C. difficile* infection rate by 66% for less than \$10 per treated room. The Halo Disinfection System delivers complete hands-free room disinfection at a 6-log kill rate that saves patients' lives. All at a cost that protects your budgets too.

Learn how to reduce infection rates at your facility by visiting www.sanosilinternational.com/ajic. There you can find out more about our Halo Disinfection System, download a copy of the urban hospital case study, and find a distributor near you.

Kills 99.9999% of *C. diff* spores
